# CLEANING AND MOUNTING RECOMMENDATIONS

Making print come alive

## CYLINDER AND SLEEVE CLEANING

- › Clean cylinder and sleeve removing all contamination, particularly ink and adhesive residue
- › **For surface cleaning use:** 50/50 Isopropyl alcohol and water
- › Wipe the surface using a dry tissue. The cylinder and sleeve must be totally dry to prevent any pollution during the mounting process
- › Some sleeves can be damaged by nicks and scratches. These defects / irregularities can affect the level of adhesion

## PLATE CLEANING

- › Clean plate removing all contamination, particularly ink and adhesive residue
- › **For surface cleaning use:** 50/50 Isopropyl alcohol and water
- › Wipe the surface using a dry tissue. The plate must be totally dry to prevent any pollution during the mounting process. This also helps to prevent plate lifting
- › Some new plates can present some contamination from the photopolymer plate making process. This can affect the level of adhesion and cause plate lifting

**NOTE: Ethyl Acetate (heavy solvent) can strongly affect adhesive performance and leave residue**

## TAPE MOUNTING ON THE CYLINDER AND SLEEVE

- › Apply the tape in a sweeping motion, line by line
- › The embossed surface of the liner helps to prevent air entrapment between the tape and the cylinder / sleeve. It also enables quick and easy air bubble removal
- › Apply consistent pressure during the mounting process. Using a squeegee, will help to ensure optimum bonding between the tape and the cylinder / sleeve

## PLATE MOUNTING ON THE TAPE

- › Apply the plate in a sweeping motion
- › The embossed surface of the liner helps to prevent air entrapment between the tape and the plate. It also enables quick and easy air bubble removal
- › Apply consistent pressure during the mounting process. Using a rubber roller, will help to ensure optimum bonding between the tape and the plate. This is particularly important on the edge and will help to prevent plate lifting
